

A diagram illustrating document size specifications. It features a large white rectangle with a red border, representing the 'Full Bleed Size'. Inside this rectangle is a smaller white rectangle with a dashed green border, representing the 'Document Trim Size'. The area between the red and green borders is the 'Safety Area'. On the right side, three colored boxes (red, orange, and green) are stacked vertically, each with a line pointing to its corresponding border: the red box points to the outer red border, the orange box points to the inner orange border, and the green box points to the inner green border.
